## SUMMARY

Full-Stack Developer specializing in MERN and AWS serverless architecture. Experienced in building scalable platforms. A dedicated problem-solver with a strong algorithmic foundation, having 460+ problems solved across LeetCode, GFG, and CodingNinjas, and maintaining a comprehensive open-source DSA repository.

---

## SKILLS

- **Frontend:** Next.js, React.js, Redux, Tailwind CSS, ShadCN
- **Backend:** Node.js, Express.js, REST APIs, WebRTC, WebSockets, Authentication & Authorization
- **Database:** MongoDB, PostgreSQL, Redis, Firebase, Supabase
- **Cloud & Development Tools:** AWS (S3, Lambda, CloudFront, CloudWatch, EC2), Git, GitHub, Postman, Docker, Redis, CI/CD
- **Other:** Data Structures & Algorithms, Conversational AI, System Design

## PROJECTS

### Snappix | Full-Stack Social & Media Platform

- **Stack:** React, Redux, Node.js, MongoDB, AWS (S3, Lambda, CloudFront).
- **Architecture:** A stateless, **Serverless backend** using Node.js and **AWS Lambda**,
- **Media Pipeline:** Integrated **AWS S3** with **Signed URLs** for secure uploads and **Amazon CloudFront** for low-latency, global content delivery reducing latency by **40%** for global users.
- **State Management:** Managed complex application states, including watch history, subscription logic, and creator dashboards using **Redux Toolkit** and Mongoose.
- **Key features:** Creator Dashboard, Subscriber tracking, JWT Auth, and automated Watch History.
- **Performance:** Optimized UI responsiveness with **Skeleton Loaders** and implemented a desktop-specific "Theater Mode" to mimic professional streaming experiences.
- **Cloud Observability:** Configured **Amazon CloudWatch** for real-time logging and monitoring.
- **Future Goals:** Currently migrating Snappix to **HLS (HTTP Live Streaming)** for adaptive bitrate support and implementing a **Node.js Stream-based** comment bad word filtering

### Simon Says | JavaScript Logic Game

- Developed a memory-based sequence game using **Vanilla JavaScript** and **DOM manipulation**.
- Built logic to generate randomized patterns and validate user input against the stored sequence.
- Managed game states (start, level-up, game-over) and tracked high scores using **Local Storage**.
- Handled timed visual cues and user feedback using CSS animations and JavaScript timeouts.

## Sidcup Family Golf (UI/UX Clone)

- Implemented complex scroll-driven animations and custom cursor interactions using **GSAP**, enhancing user engagement through fluid motion design.
- Optimized asset loading and CSS transitions to ensure 60FPS performance across mobile and desktop browsers.

## Netflix UI Clone

- Developed a 1:1 visual clone of the Netflix home screen, implementing complex navigation bars and content carousels.

---

## EDUCATION

### UMT - Bachelor in Computer Science

Aug 2025

- Currently enrolled (2nd semester) in the BSCS program.
